SUMMARY

Backend software engineer with 10 years of experience building distributed systems and cloud-native applications. I've worked in the industrial SaaS, healthcare, and e-commerce industries, primarily using Go, TypeScript/Node.js, PostgreSQL, Kubernetes, and AWS. My experience includes high-traffic APIs, production infrastructure management at scale, leading projects from initial design through deployment and maintenance, and engineering team leadership.
US citizen based in South Korea (F-2 visa; no sponsorship required).

SKILLS

Programming Languages: Go, TypeScript, JavaScript, Python; additional experience with Dart, Perl, C, C++, C#, Java

Backend & Architecture: Node.js, gRPC, REST APIs, microservices, event-driven workflows, Model Context Protocol (MCP)

Frontend: React, Vue, Flutter

Cloud & Infrastructure: AWS, GCP, Kubernetes, Docker, Helm, GitHub Actions, Redpanda/Kafka, CI/CD

Data & Applications: PostgreSQL, TimescaleDB, ClickHouse, SpiceDB, Airflow

EXPERIENCE

Glassdome, Inc. **Seoul, KR | October 2024 - Present**
Head of Backend Software Engineering July 2026 – Present
Mid-Level Backend Software Engineer October 2024 - July 2026

- Co-designed and built a new carbon footprint product, completing the initial core implementation in 3 months against a 6-month target. Later led development to prepare it for production, working with PCF consultants, product, and design to define technical requirements and prioritize development work.
- Led key phases of a ClickHouse-to-TimescaleDB migration across manufacturing time-series data, reducing selected expensive query times from ~12 seconds to under 1 second and lowering database costs by ~$2,000/month.
- Sole technical owner of Catena-X/Cofinity-X interoperability, designing and implementing Redpanda-backed saga workflows for multi-step carbon footprint exchanges and training the sales team on its use.
- Designed and implemented SpiceDB-based access controls, migrating existing customer permissions without disrupting access.
- Implemented customer-facing manufacturing data and carbon footprint APIs with asynchronous ingestion and historical retrieval.
- Implemented a company-scoped backup system using Temporal workflows and gRPC, including scheduled backups across services, resumable execution, and audit logging.
- Maintained production Kubernetes infrastructure on AWS with >99.99% reported uptime in 2025 and 2026.
- Managed an 11-person engineering organization, reporting to the CEO and owning company-wide engineering roadmaps and delivery.

MXN Technology **Seoul, KR | September 2021 – October 2024**
Lead Software Engineer August 2022 - October 2024
Software Engineer September 2021 - August 2022

- Led internal R&D engineering team, proposing and implementing new technologies for the company to adopt.
- Consolidated infrastructure from AWS, Azure, and GCP onto GCP and automated deployment pipelines for multiple engineering teams.
- Led an international team developing a Flutter-based beauty marketplace, establishing application foundations, owning TypeScript backend services and AWS infrastructure, and coordinating remote contractors; designed for 300,000 daily users across Korea and the US.
- Designed order and warehouse management systems integrating Shopify, Naver SmartStore, and Coupang for order fulfillment; modernized Vue and JavaScript codebases to Vue 3 and TypeScript.

athenahealth **Watertown, MA, USA | August 2017 – July 2021**
Senior Member of Technical Staff February 2019 - July 2021
Member of Technical Staff August 2017 - February 2019

- Helped redesign and rewrite legacy prescription workflows to support Surescripts' NewSCRIPT standard, replacing error-prone code in the process.
- Served as sole technical owner of a prescription-monitoring integration supporting ~1 million requests/day; helped reduce clinicians' mandatory controlled substance history lookup from 5–7 minutes to under 10 seconds.
- Migrated real-time prescription benefit checking from a Perl monolith to a Node.js microservice handling ~6 million requests/day; subsequently served as its sole technical owner, coordinating integrations with multiple vendors based on patient insurance.
- Served as Scrum Master for a team of engineers based in the US and India.

Thales Visionix **Billerica, MA, USA | July 2016 - July 2017**
Associate Software Engineer July 2016 - July 2017

- Designed and built a C# Unity plugin retrieving data from the company's motion trackers, and built a demo application for showcasing this at trade shows.
- Owned motion tracker SDK, supporting legacy products and updating their library to handle new product releases.

EDUCATION

B.A., Computer and Information Sciences | University of St. Thomas | Minor in Statistics | St. Paul, MN, USA | 2016
