James Jensen

Seoul, South Korea jcjens94@gmail.com 010-3282-2208 linkedin.com/in/james-c-jensen

SUMMARY

Software engineer with 10 years of experience designing cloud-native applications and distributed backend systems. Experienced in system architecture, performance optimization, production infrastructure, and modernizing complex services across industrial SaaS, healthcare, and e-commerce industries. Specialized in Go, TypeScript/Node.js, Kubernetes, and AWS/GCP, with experience managing engineering teams.
US citizen based in South Korea (F-2 visa; no sponsorship required).

SKILLS

Programming Languages: Go, TypeScript, JavaScript, Python; additional experience with Dart, Perl, C, C++, C#, Java

Backend & Architecture: Node.js, gRPC, REST APIs, microservices, event-driven workflows, Model Context Protocol (MCP)

Frontend: React, Vue, Flutter

Cloud & Infrastructure: AWS, GCP, Kubernetes, Docker, Helm, GitHub Actions, Redpanda/Kafka, CI/CD

Data & Applications: PostgreSQL, TimescaleDB, ClickHouse, SpiceDB, Airflow

EXPERIENCE

Head of Backend Software Engineering

Glassdome, Inc. **October 2024 - Present, Seoul, KR**

- Co-designed and developed a new carbon footprint product, completing its initial core implementation in 3 months against a 6-month target; subsequently led hands-on production-readiness development.
- Migrated timeseries database from ClickHouse to TimescaleDB, reducing the most expensive query times from ~12 seconds to under 1 second and lowering database costs by ~$2,000/month.
- Designed and implemented Catena-X/Cofinity-X product carbon footprint exchange workflows using Redpanda-backed orchestration.
- Led design and implementation of SpiceDB-based access controls.
- Implemented customer-facing manufacturing data and carbon footprint APIs with asynchronous ingestion and historical retrieval.
- Built an MCP server for secure AI client integration with product APIs.
- Maintained production Kubernetes infrastructure on AWS with >99.99% reported uptime over the past year.
- Assumed engineering leadership responsibilities following the Director of Engineering's departure; managed an 11-person engineering organization and reported to the CEO.
- Collaborated with non-technical PCF domain experts, product, and design to translate complex carbon footprint requirements into technical designs and prioritized engineering work, while owning engineering roadmaps and delivery.

Lead Software Engineer

MXN Technology **September 2021 - October 2024, Seoul, KR**

- Led internal R&D engineering team, proposing and implementing new technologies for the company to adopt.
- Consolidated infrastructure across teams from AWS, GCP, and Azure onto GCP, centralizing operations and enabling automated deployment pipelines.
- Led engineering development of a Flutter-based beauty marketplace, establishing app foundations, owning TypeScript backend services and infrastructure, and preparing for a designed capacity of 300,000 daily users across Korea and the US.
- Designed order and warehouse management systems integrating Shopify, Naver SmartStore, and Coupang for order fulfillment; modernized Vue and JavaScript codebases to Vue 3 and TypeScript.

Senior Member of Technical Staff

athenahealth **August 2017 - July 2021, Watertown, MA, USA**

- Contributed to the design, architecture, and implementation of a major e-prescribing modernization initiative, rewriting legacy prescription workflows to support Surescripts's NewSCRIPT standard and replace error-prone logic.
- Served as long-term technical owner of a prescription-monitoring integration supporting ~1 million requests/day; helped reduce clinicians' controlled-substance history lookup from 5–7 minutes to under 10 seconds.
- Migrated real-time prescription benefit checking from a Perl monolith to a Node.js microservice handling ~6 million requests/day, integrating multiple vendors based on the patient's insurance.
- Served as Scrum Master for a team of engineers based in the US and India.

Associate Software Engineer

Thales Visionix **July 2016 - July 2017, Billerica, MA, USA**

- Designed and built a C# Unity plugin retrieving data from the company's motion trackers, and built demo application for showcasing this at trade shows.
- Owned motion tracker SDK, supporting legacy products and updating library to handle new product releases.

EDUCATION

B.A., Computer and Information Sciences

Minor in Statistics • University of St. Thomas • St. Paul, MN, USA • 2016
