SUMMARY

Backend software engineer with 10 years of experience building cloud-native distributed systems. Experienced leading cross-functional teams through architecture design, roadmap planning, and delivery. Specialized in Go, Node.js, and cloud infrastructure. F-2 visa, no sponsorship required.

SKILLS

Programming Languages: Go, TypeScript, JavaScript, Dart, Perl, C, C++, C#

Frameworks: Node.js, React, Vue, Flutter, gRPC

Cloud & Infrastructure: AWS, GCP, Kubernetes, Docker, Github Actions, Kafka, Helm

Databases: Postgres, TimescaleDB, ClickHouse

Concepts: CI/CD, Agile, Scrum, System Design, REST APIs, Microservices, AI-Assisted Development, Model Context Protocol

EXPERIENCE

Lead Backend Software Engineer

Glassdome, Inc.

October 2024 - Present, Seoul, KR

- Led backend engineering team and represented engineering org on leadership team.
- Owned the company-wide annual product roadmap and team sprint planning, ensuring customer-facing commitments were delivered on schedule.
- Migrated timeseries database from ClickHouse to TimescaleDB, improving response time from 12 seconds to less than 1 second for the most expensive queries, as well as decreasing database costs by \$2000 per month.
- Designed and rebuilt company's main product in 3 months, 2 months ahead of schedule.
- Integrated with several external vendors for sharing and receiving Product Carbon Footprints (PCFs), earning Catena-X certification and placement on their marketplace.
- Maintained production Kubernetes cluster on AWS with >99.99% uptime over the past year.
- Built an MCP platform for a new product, enabling AI clients such as ChatGPT and Claude to securely integrate with product APIs and workflows.

Lead Full-Stack Software Engineer

MXN Technology

September 2021 - October 2024, Seoul, KR

- Led internal R&D team, proposing and implementing new technologies for the company to adopt.
- Pushed company to switch from a scattered set of server hosts (AWS, GCP, Azure) to just use GCP, centralizing costs and management, enabling developers to share infrastructure knowledge, and allowing deployment pipelines to be automated.
- Developed app and server infrastructure for beauty marketplace app, supporting 300,000 daily users across Korea and the US.
- Developed NFT provenance app targeted at art galleries, showcased at NFT.NYC in 2023.
- Designed and developed several Node servers and Quasar (Vue) frontends for order management and warehouse management systems.
- Mentored and developed engineers into independent contributors, improving team delivery capacity and reducing onboarding burden.

Senior Member of Technical Staff

athenahealth

August 2017 – July 2021, Watertown, MA, USA

- Served as scrum master for a team of developers based in the US and India.
- Led migration of a Perl monolith service to a Node.js microservice serving over 1 million requests per day and increasing success rate from 20% to 95%, while helping establish AWS best practices company-wide.
- Designed and built a RESTful Node.js micro-service from the ground up, serving over 6 million requests per day.
- One of the tech leads on a major company initiative to rebuild our electronic prescription service, collaborating on its design, project planning, and development.

Associate Software Engineer

Thales Visionix

July 2016 – July 2017, Billerica, MA, USA

- Built plugin for Unity 3D to retrieve data from company's motion trackers, and built demo application for showcasing this at trade shows.
- Owned motion tracker SDK, supporting legacy products and updating library to handle new product releases.

EDUCATION

Bachelors, Computer and Information Sciences

Minor in Statistics • University of St. Thomas • St. Paul, MN, USA • 2016 • 3.6 Major GPA
